EXPERIENCE (3 YEARS)

Dropdeck, Ho Chi Minh — _Software Engineer_

Apr 2017 - Jan 2018

Dropdeck is the Amazon for Innovation and Investment. Joining Dropdeck at early state meaning i will have giant challenges always pushing me work harder and harder ever. In Dropdeck, i am in charge of building the website from skeleton and taking care of the front-end with React/Redux. I also deal with Python/Django in backend side to implement excellent AI system for supporting our product.

Raydar, Ho Chi Minh — _Software Engineer_

Jul 2016 - Mar 2017

Raydar is a data driven search engine for stock photos to help designers and marketers find the right photos for their campaigns, faster. I had opportunity to be a colleague in a Singapore-Vietnam team and learned many deep things about React-Redux, MongoDB, Restful API, NodeJS. In a niche team, we had good connections and gained many experiences.

IMT Solutions, Ho Chi Minh — _Software Engineer_

Apr 2015 - Jul 2016

IMT is famous in outsourced product development (OPD) in Vietnam in spite of its medium size. After having finished my internship, i had involved many projects with not only traditional technologies (ASP.NET/ASP.NET MVC/C#/PHP/MSSQL Server, MySQL) but also modern platforms (AngularJS/NodeJS/HTML5/Material Design).

EDUCATION

University of Information Technology, Ho Chi Minh — _Software Engineering_

Sep 2011 - Jun 2016

Graduated with good Bachelor of Engineering (8.25/10)
Top 4 Honor Students of Class 2011

SKILLS

- ✓ **2+** years of experience with **ReactJS/Redux** and **Angular2**(+)
- ✓ HTML, CSS, JavaScript, JQuery, Bootstrap, HTML5, Material Design
- ✓ Responsive Web Design Development
- ✓ **Restful API in NodeJS** or **Python**
- ✓ AGILE
- ✓ Git

AWARDS

- ✓ The **2013 UIT Game Hackathon Prospective Prize** with the product **Sticky Man**.
- ✓ The **First Idel Prize** and The **Third Prize** (Final Round) of the **Mobile Programming Contest 2014** with the idea and the app **Strong Heart**.
- ✓ **The Typical Student** of UIT 2013
- ✓ The active member of **The ITIC Club** in UIT and **Academic Board in the Faculty** of SE

LANGUAGES

Vietnamese - Native proficiency
English - Working proficiency

SCI (Silicon Cloud International) — *Jun 2016 – March 2017*

SCI webapp is to provide a secure and private cloud computing semiconductor workflow platform for the global market. The cloud computing architects turned to us to help develop a high performance, collaborative cloud computing environment that has been launched successfully in Singapore, the UAE, and Malaysia.
In SCI, i developed new features that used AngularJS for FE and NodeJS in server side. AngularJS is not good at high performance website that made a lots of bugs that time. With a blank experience, i practised very much to learn how to bind data, try to understand many modern technologies such as: AngularJS, HTML5, upgrading Bootstrap for front end development, Node.js for the server side script, and Titan Graph Database to achieve optimal performance in dealing with big data.

Raydar Website — *Jun 2016 – March 2017*

Raydar website is to provide a marketplace for searching and getting stock photos (Free or Premium) from many sources with a big data reached 100 millions photos, also including easily buying feature based on simple e-Commerce flow.
From zero to hero absolutely is the most suitable phrase to describe my journey here. With a talent team, i had a very good time to learn and contribute a lot to the Front-end side based on ReactJS-Redux. I also researched to understand high-level about Restful APIs in NodeJS, MongoDB Database and Elastic Search as well.

Raydar Admin Panel — *August 2016 – March 2017*

Raydar Admin site is one internal site that help partners export sale reports and interns do curate the quality of photos showed on search results page. Also including the feature choosing hand-picked collection on home page and some small internal features that need for the team.
Raydar Admin is amazing challenge for me because i need to build it from scratch. I intergrated a new admin site built with Material Design and ReactJS. Mobile friendly or responsive is the most high priority to help curators increasing their performances so that i gained a lot of these experiences.

goDropdeck Website — *Apr 2017 – Jan 2018*

goDropdeck Webapp is the main product of company that had built by jQuery, Bootstrap, Django before.
I'm in charge of building new goDropdeck version from skeleton with React/Redux, reflectored a huge number of code lines in Django Python source code to make a Restful APIs for serving Frontend.
goDropDeck is a cross-border business funding platform that is a royalty and debt financing platform for fast growing businesses with a pure smart-contract and token-incentivized mechanism to evaluate and fund businesses worldwide.
Because of its FinTech, i have to care about everything from financing problems, trading, investing, blockchain to many technologies to increasing the performance, tracking solutions, dealing with marketing plans...
One more important thing that i have learned from all the times i have been working in Startups is what i faced to the problems, how i opened up my mind and tried to fix them, and i realized that there would be a way.

Drodeck Community Website — *Nov 2017 – Jan 2018*

Drodeck Community Website is extremely internal site that help people in Dropdeck network can manage their accounts, wallets and exchange their tokens, and expand their networks for earning profits from many programs.
Working with an Angular2 Theme that made me feel very excited and learned a lot of new things. Although Angular2 dealt with React Strategy, it still have many big differences such as: Typescript, lifecycle of components, two ways binding, simplifying coding...
